

Accelerating Application Development and Ensuring Compliance for a Regional Wholesale Bank

ABOUT THE CLIENT

Our client is a regional wholesale bank and acts as a pillar of financial stability for the regions they serve. They provide reliable funding for residential housing, champion affordable housing initiatives, and support community development through strategic investments.

Challenge

The client's data technology organization encountered an urgent need to address a series of tasks related to treasury, accounting, and enterprise risk. Some of these initiatives were regulatory requirements mandated by the federal government, while others were general technology enhancement projects. The regulatory issues had strict deadlines and carried the risk of costly penalties, and our client lacked the in-house capacity to address everything on their own. They needed a software development team that could ramp up quickly, develop a solution, and ensure their compliance.

Solution

Evergreen leveraged our expertise in scrum to develop an application that enables the client to comply with requests from regulatory bodies. At the heart of this program was the custom-built development team that we assembled and onboarded in less than four weeks. The cross-functional scrum team consisted of a scrum master and four skilled developers experienced in C#, SQL, Angular, .NET, test automation, and DevOps.

How We Delivered

- Developed and hosted a custom two-day launch event with [Compass](#), our culture consulting team, and Evergreen's enterprise agile coach.
- Provided project management support to ensure deliverables were met on time and within budget.
- Developed and deployed automated testing procedures within the Microsoft Azure cloud framework.
- Adopted Cucumber using Gherkin syntax to make requests from the business side more digestible.

Our team was so successful that they became the catalyst for scrum implementation within the client's organization.

Tech and Tools Used

- AngularJS
- Microsoft Azure
- Azure DevOps
- Azure Virtual Desktop
- Cucumber with Gherkin
- Confluence
- .NET
